

Rockwell Automation is a globally operating company with a leading position in the fast-growing market of industrial automation. Our technologically sophisticated Allen-Bradley and Rockwell Software products offer our customers a comprehensive range of components and systems. Our customers are leading production companies, mechanical engineers, plant manufacturers and systems integrators.

To support the successful and timely worldwide market introduction of the components and solutions, which are developed and manufactured by us, we are looking for the renewal of our R&D team in **Aarau** and **Milwaukee** a professionally competent and experienced

Senior Electrical Project Engineer (m/f)

Your responsibilities:

In this challenging, interesting and varied function, you are responsible for different fundamental research activities in a small team for the preparation of new innovative products. With your technical expertise, you also support further improvements or developments of our existing products. You will collaborate with engineers and technicians within the department Engineering and Technology but also with employees of other divisions as Advanced Technology, Industrialization and Quality Insurance as well as with colleagues at other locations (USA, China, Poland, etc). Communication, written and spoken, is therefore often made in English. In addition, the cooperation with external consultants and Technical Universities in- and outside of Switzerland is an important part of your assignment.

Your profile:

Your education as electrical engineer with a master degree or a diploma degree of a Technical University or a University of applied science is the precondition for a successful performance. In addition, you have at least 10 years of professional experience in electrical engineering. As employee of a globally active company, we expect good knowledge in German and English language (written and spoken). Are you a person who likes to dive into the details without losing sight of the target? Do you want to contribute with your skills and ideas to the development and problem solving of electromechanical (mechatronic) switch- and protection gear? In that case, you are in the right place with us!

What we offer:

A responsible work is waiting for you in a dynamic and emerging environment, with the advantages of a worldwide active company. A thorough introduction and continuous training are self-evident for us as well as fair pay scales, attractive conditions and good social benefits.

We look forward to receive your application **by e-mail** to the following address:
