

Responsible Engineer Black Utilities

The Responsible Engineering (RE) Black Utilities own and provides engineering technical support for all Black Utilities for the Solothurn campus. The campus consists of a Central Utilities Building, Warehouse, Manufacturing, and related supporting buildings and equipment. This function will plan and co-ordinate all Black utilities engineering activities to meet the campus needs in terms of Black utilities capacities and reliability in full compliance with Safety, Quality, and Compliance.

Primary Responsibilities

She/he will provide the technical expertise to the campus Black Utilities operation team in terms of: Design of new equipment and changes, Reliability methodology, Investigation of technical issues and deviations, Establish procedures, Maintenance plans and Technical training for operators and technicians. This position will also be instrumental in building the required procedures related to the Utilities activities and align them with global procedures and guidelines:

- Analyze Customers, Regulation and Biogen policies/procedures expectations for Black Utilities and identify any gaps with our actual systems
- Evaluate the risks correlated with the gaps and propose preventive/corrective actions
- Troubleshoots equipment's function main failure and performs root cause investigations and analysis
- Apply the concept of Reliability Engineering, monitors and benchmarks equipment operability and performance, creates metrics
- In a later phase: Deliver projects for new and modified utilities equipment by providing feasibility study, User requirement, Project plan, budget, project management, costs control, commissioning and documentation
- Provide utilities equipment identification, criticality, maintenance assessment and data, hierarchy, maintenance strategy, Spare parts stocks levels and maintenance plans to the Planning & Scheduling team
- Responsible for accurate content of equipment master data in CMMS (Computerized Maintenance Management System). Promote the continuous improvement of the utilities preventive maintenance program effectiveness
- Establish & maintain procedures and technical training related to the Utilities Operations and Maintenance Program that ensures compliance to EHS and cGMP's
- Participate in cross site engineering benchmarking and improvement meetings, communicates across departmental lines

Qualifications/Skills

- BS/MS Degree in mechanical or electrical Engineering with preferably related industry experience or training; or a combination of education, training and experience
- Previous experience within an industrial utilities environment
- Good understanding of cGMP Operations would be a plus
- Knowledge of Siemens Desigo would be a plus
- Excellent communication skills in both English and German Great team mate willing to evolve within an international and dynamic environment
