About RepRisk

RepRisk is a leading research and business intelligence provider, specialized in ESG and responsible business conduct risks.

With over a decade of experience serving the world's largest financial institutions and corporates, RepRisk is a pioneer in ESG and business conduct due diligence data. We are the only ESG research provider to cover private companies, as well as emerging and frontier markets.

As a premium due diligence solution, we help our clients prevent and manage business conduct risks related to their operations, business relationships, and investments. Our suite of powerful risk management and compliance tools helps to reduce blind spots and shed light on potential business conduct risks that may lead to reputational, compliance, and financial risks.

We believe that responsible business conduct goes hand-in-hand with sound financial and reputational risk management, operational excellence, and profitable growth in the medium and long term.

Job Description

You will be part of our growing Technology team developing software solutions used by our clients around the globe. Our flagship product, the ESG Risk Platform, is a unique interactive tool that allows our clients to analyze and manage their own environmental and social footprint as well as the footprint of the companies they are doing business with. With ten years in business, RepRisk is a well-established, yet continuously growing player in the ESG market. The Technology team itself is based in RepRisk headquarters in Zurich, in Manila and now also in our recently opened Operations and Research Hubs in Berlin-Mitte and in Toronto.

Data analysis, visualization and interactive manipulation of large data sets are at the core of our business. You will benefit from working in a small but experienced team that offers support and the opportunity to greatly enhance your technical skills and knowledge. You will be working in an agile work environment using modern open-source technologies. We are looking for people who are keen to contribute ideas, love finding new, brilliant, and implementable solutions and to pro-actively shape our global frontend and UX competences.

Responsibilities

- Implement user interfaces using the latest JavaScript/ECMAScript technologies (e.g. React), HTML and CSS.
- Maintain and develop the front-end workflow with automation tools such as WebPack.
- Develop cutting edge, dynamic, client-side systems with GraphQL.
- Design and prototype state-of-the-art user interfaces and interaction concepts.
- Extend and improve functionality and usability of existing user interfaces.
- Integrate frontends with existing APIs / software systems.
- Frontend testing and quality assurance.
- Evaluate and identify new frontend technologies.

Candidate Profile

You have multiple years of experience in frontend engineering and interaction design and excellent knowledge of modern JavaScript/ECMAScript architectures (for example React/Redux), HTML and CSS and related technologies. You are proficient in state-of-the-art UI technologies, UX design concepts and familiar with build tools and versioning systems. Experience with prototyping tools and with visual design concepts would be a plus.

You are results-driven and maintain a pragmatic outlook without compromising quality. Proficiency in all areas of frontend development and the ability to cope with an agile environment should be among your established skills. The position requires strong self-management, the ability to deliver on agreed-upon tasks, and to manage expectations even when under pressure. You must be fluent in English.

Benefits

- Entrepreneurial and dynamic work environment with a young and motivated international team within an established company setting
- Flexible working hours
- Opportunity to make a significant contribution to the field of sustainability
