

## Groundbreaking virtual advertising solutions

uniqFEED, A *Spin-off Company of ETH Zurich, Switzerland* is a computer vision specialist based in Zurich. We offer highly innovative, groundbreaking and entirely software-based solutions which virtually overlay existing perimeter board advertisements in sports stadiums with other content of choice for live television broadcast. For our headquarters in Zurich, we are currently seeking a

## C++ Software Engineer (80-100%)

### Your duties / core responsibilities

- Responsibility for uniqFEED's software products by
  - implementing design choices to keep high quality and maintainability.
  - owning part of the software system.
  - extending the backend API.
  - supporting the integration of new features.
  - performing bug triage and fixing bugs.
- Support uniqFEED's UI/UX ecosystem, which is used by our Operators during our live cases
  - collaborate with the operators for feedback on UI/UX improvements
  - perform ticket and bug triage and decide what feature is needed by when
  - further improve current UI/UX environment towards the goal of having an easy to use and reliable end-to-end system.
  - Operator training upon new software releases.

### Your benefits

- A dynamic, fast-growing environment with many possibilities for further development.
- A highly motivated, interdisciplinary, multi-cultural team with focus and vision.
- A competitive salary.
- Flexible working hours in an appealing work environment in our new HQ in Glattbrugg, Zurich

### Your profile

- B.Sc. / M.Sc. in computer science, electrical engineering, or related field.
- Proficient in C++ (3 years) and good software development skills.
- Experience in programming with Qt / QML.
- Experience in maintaining and refactoring large software products is a plus.
- Knowledge of modern software development processes including agile methodologies, testing, and continuous integration.
- Good problem solving and communication skills.

### Your application
