Groundbreaking virtual advertising solutions

uniqFEED, a spin-off Company of ETH Zurich, is a computer vision specialist based in Zurich. We offer highly innovative, groundbreaking and entirely software-based solutions which virtually overlay existing perimeter board advertisements in sports stadiums with other content of choice for live television broadcast. For our headquarters in Glattbrugg, Zurich, we are currently seeking a

Linux System Administrator / Network Engineer (80 - 100%)

Your duties / core responsibilities

- Responsibility for extending, optimizing, and maintaining the current network infrastructure to support uniqFEED's fast growth.
- Responsibility for a seamless connection between the HQ and our on-site production equipment during live sport events.
- Responsible to extend and maintain our general IT infrastructure (hardware and software).
- Monitoring of the in-house and on-site server farm.
- Procurement of IT and network equipment.

Your benefits

- A dynamic, fast-growing environment with many possibilities for further development.
- A highly motivated, interdisciplinary, multi-cultural team with focus and vision.
- A competitive salary.
- Flexible working hours in an appealing work environment in our new HQ in Glattbrugg, Zurich.

Your profile

- 5+ years of experience in data network engineering and maintaining heterogeneous network infrastructure (mainly Linux, some Windows).
- Know-how in routing, firewall configuration, and DHCP.
- Experience with professional network equipment (Cisco, etc.) is a plus.
- Experience with services such as Kerberos, Samba, NFS, Nginx, LDAP, OpenVPN is a plus.
- Good problem solving and communication skills.
- Solid language skills in English (German is a plus).
- You enjoy working in an environment where sports meets future technology

Your application

Please send your detailed CV, a concise motivation letter/email to: jobs@uniqfeed.com.

Swiss or EU work permit is mandatory.
