

BEREIT FÜR DIE ZUKUNFT?

We are a global market leader in the development, manufacturing and supply of actuators for industrial automation and medical applications, and offer an exciting opportunity for an engineer to join our company as a:

Product Development Engineer – Automation

Scope:

- Join our product development consisting of mechanical, electronics and software engineers
- Invent, design and realize mock-ups, prototypes and products
- Drive and monitor lab and field tests
- Consult customers, sales and sister manufacturing units
- Align the activities between the product development of the different manufacturing units globally
- Develop solutions that are commercially competitive already from the start

Requirements:

- Bachelor/Master of Science in Mechanical Engineering
- Experience with design of mechatronic solutions including motors, gears, linear guides, sensors and control systems
- Proficient user of 3D CAD and calculation tools (e.g. Creo ect.)
- Agile Product Management techniques (e.g. SCRUM)
- Passion for technology and engineering, how things work
- Ability to convince and guide multi-cultural teams
- Fluent in English, availability to travel globally

We offer a challenging and multifaceted position within an international work environment as well as the personal development opportunities of a large multinational group.
